

Tyler Hanstad

Surveyor

Education

Associate of Applied
Science:
Civil Engineering
and Surveying
Technology

North Dakota State
College of Science

Certifications

Mn/DOT
Construction
Technician:
• Aggregate
Production
• Bituminous
Street I
• Concrete Field I
• Grading & Base I
• Erosion Control –
Inspector/Installer

Summary

Tyler has more than nine years of experience as survey crew chief and construction inspector. His expertise includes construction staking, boundary surveys, topographic surveys, and ALTA surveys and he is well-versed in Trimble GPS, robotic and conventional surveying methods. He has managed survey teams on major site-development projects, including grading, roads, drainage, and sewer and water facilities. His inspection background includes utility, grading and base, erosion control, and paving inspection. Tyler has also performed topographic surveys and construction staking on many projects. His responsibilities include:

- + Highway, residential, and commercial site construction layout
- + Topographic surveys for preliminary planning and site design
- + Construction as-built and ALTA surveys
- + Land section breakdowns for rural boundaries
- + Survey and post boundaries for residential and commercial lots

“ **Boy, do we have the right guy for you.** ”

That’s what I recently told a client who wanted construction assistance in addition to survey work. Tyler’s not just a survey crew chief, he’s also a construction inspector who has a keen eye for design.

His construction background means he not only ensures that a contractor is building a project correctly, he also anticipates and avoids problems before they occur. His ability to do so many things well is another example of why we aren’t big on job titles at Stonebrooke. He’s always thinking on his feet — looking at every facet of a project to ensure our clients’ projects are done right.”

— **Tim Arvidson, PE, Vice President, Stonebrooke Engineering**
